Summary

Detail-oriented professional with a strong foundation in data management, CRM operations, and analytical reporting. Experienced in leveraging Advanced Excel, Salesforce, and SQL to support business validation, master data updates, and report generation. Skilled at translating complex data sets into actionable dashboards and maintaining high-quality documentation. Committed to continuous improvement and effective cross-functional collaboration in fast-paced operational environments.

Technical Skills

Data Management:	Master Data Management (MDM), Data Validation, CRM Systems, Database Updates
Programming & Databases:	Python, SQL, MySQL, Data Extraction
Business Intelligence:	Tableau, Power BI, Advanced Excel, Data Reporting
Operations Support:	Internal Ticketing, Process Documentation, Quality Assurance, Audit Support

PROJECTS

Customer Purchase Behavior Analytics

SQL, Python, Power BI

- Developed an automated reporting dashboard using Python and SQL to extract and process transaction datasets, saving 10 hours of manual effort weekly.
- Created comprehensive performance scorecards in Power BI to track key performance indicators (KPIs) and visualize customer trends.
- Improved database validation procedures for customer records, reducing data processing errors by 30% through targeted Python scripting.
- Participated in System Integrated Testing (SIT) and unit testing phases to ensure high reliability in business reporting tools.
- Supported cross-functional client reviews by presenting actionable business insights derived from structured data analysis.

Loan Default Risk Prediction

Python, SQL, Scikit-learn, Pandas

- Developed and validated financial datasets exceeding 50,000 records using Pandas and Python, ensuring high data integrity for Management Information Systems (MIS) reporting.
- Implemented complex SQL queries to analyze credit risk factors, assisting in the automation of reporting models.
- Optimized database extract, transform, and load (ETL) routines, reducing manual data processing time by 20%.
- Assisted in the audit and reconciliation of database entries to maintain accurate customer and transaction records.
- Completed regular validation checks on financial datasets to ensure compliance with reporting standards.

AI-Powered Computer Vision Attendance System

Python, OpenCV, SQL

- Developed an automated attendance tracking application using Python and OpenCV, achieving a 95% logging accuracy rate over legacy systems.
- Managed normalized database schemas and implemented RDBMS best practices using SQL to manage data structures for over 1,000 student records.
- Created comprehensive process documentation and operational logs, facilitating project transitions and team knowledge sharing.
- Implemented automated validation checks to identify data discrepancies, decreasing exception rates by 15% through improved system reliability.
- Updated data entry workflows and maintained system documentation to support seamless user interaction and effective information management.

EDUCATION

SASTRA Deemed University | B. Tech - Electronics and Communication Engineering | Oct 2021 - Sep 2025
Thanjavur, Tamil Nadu

CERTIFICATIONS

Scaler Certified:SQL & Database Design with MySQL
