Projects

Customer Purchase Behavior Analytics

- Designed clear, user-friendly guidance flows to help non-technical stakeholders navigate data platforms mirroring the patience and clarity needed to walk customers through step-by-step support.
- Investigated and resolved data inconsistencies across 3,000+ customer transaction records, similar to diagnosing and resolving recurring customer complaints through root-cause analysis.
- Authored process documentation for data retrieval and validation, supporting consistent, repeatable service standards.
- Automated routine reporting workflows in Microsoft Excel, cutting manual processing time by 10 hours/week demonstrating efficiency and time-management under deadline pressure.
- Developed dashboards to monitor customer satisfaction (CSAT), customer behavior, and service performance, enabling faster issue identification and improving customer support decision-making.
