

VAJRALA GEETHIKA

✉ vajralageethika8@gmail.com ☎ 9618176143 📍 Hyderabad, Telangana 🔗 GitHub

Summary

Data-driven professional with strong fundamentals in SQL, Python, and machine learning pipelines. Skilled in building business-ready dashboards and automating data workflows to solve complex operational problems. Highly agile in working with structured and unstructured datasets to derive actionable business insights. Committed to supporting cross-functional teams by translating technical findings into clear, simple business language for stakeholders.

Technical Skills

Programming & Querying:	Python, SQL
Data Analysis & Stats:	Exploratory Data Analysis (EDA), Data Cleaning, Statistical Analysis, Hypothesis Testing
Data Science & AI:	Machine Learning, Model Evaluation, Artificial Intelligence, Generative AI
Visualization:	Power BI (Dashboard Development), Qlik, Advanced Excel
Databases:	MySQL, PostgreSQL, Mongo DB
Automation & Tools:	Power Automation, Git/GitHub, VS Code, Jupyter Notebook

PROJECTS

Loan Default Risk Analysis Pipeline

Python, Pandas, SQL, ML

- Developed classification models using Scikit-Learn to predict default risk, improving predictive accuracy by 15% through optimized feature selection.
- Implemented data preprocessing pipelines for 50,000+ customer records to ensure consistent training data quality.
- Collaborated with engineering teams to conduct offline evaluations and benchmarking of model outputs against baseline metrics.
- Wrote scripts for automated validation of model performance metrics to facilitate weekly sprint planning reviews.
- Supported the translation of model outputs into risk reports for stakeholders.

Customer Purchase Behavior Analytics

SQL, Power BI, Excel

- Developed SQL-based data extraction workflows for 3,000+ transaction records, supporting large-scale dataset preparation for machine learning.
- Implemented automated data cleaning routines in Python, reducing manual labor requirements for feature engineering by 10 hours per week.
- Collaborated with cross-functional teams to define data requirements and benchmark business KPI tracking metrics.
- Created visualizations in Power BI to interpret model predictions and communicate findings to stakeholders during model reviews.
- Supported the deployment of data pipelines by testing integration points and verifying data integrity at each stage.
- Contributed to dashboard updates based on stakeholder feedback regarding data trends and operational risks.

AI-Powered Computer Vision Attendance System

Python, MySQL, OpenCV

- Developed a computer vision pipeline for facial recognition, successfully increasing identification accuracy by 25% through iterative tuning.
- Implemented pre-processing steps for image datasets, ensuring reliable model performance across varied environmental lighting conditions.
- Optimized database integration to support 1,000+ records with sub-second retrieval latency for real-time inference.
- Tested model robustness by simulating edge cases and documenting failure modes for future system improvements.
- Contributed to project documentation and weekly progress briefings by summarizing technical roadblocks and milestones.
- Assisted in the automation of attendance reporting using Python-based data ingestion workflows.

EDUCATION

SASTRA Deemed University | Bachelor of Technology in Electronics and Communication Engineering

Thanjavur, Tamil Nadu

CERTIFICATIONS

Microsoft Certified: Python for Data Science

Scaler Certified: SQL & Database Design with MySQL
